

European Data Protection Board

RE: Call for Feedback regarding Guidelines 08/2020 on the targeting of social media users

DR. JEF AUSLOOS

*Institute for Information Law, University of Amsterdam
Centre for IT & IP Law, KU Leuven*

- (1) Firstly, I wish to commend the European Data Protection Board (EDPB) for drafting Guidelines on the targeting of social media users. In doing so, it provides more clarity to the problematic legal position of many operators that are active in the online advertisement industry.¹
- (2) With this letter, I would like to point the EDPB's attention to one point in particular that needs further clarification in the updated Guidelines. Chapter 6 (pages 24-27) of the draft Guidelines sheds light on how transparency should be given shape in the context of targeting social media users. Within that chapter, there is a section specifically dedicated to **the right of access** (Art.15 GDPR).
- (3) The right of access has been a vital component of data protection laws from the very beginning.² It is part of the fundamental right to data protection in Art.8 Charter, and occupies a pivotal role in achieving the GDPR's aim of effective and complete protection of the fundamental rights and freedoms of natural persons with respect to the processing of personal data.³ As I have explained with colleagues in a previous submission to the EDPB, **the right of access operates as a *sine qua non* for exercising many other data subject rights** (Chapter III GDPR);⁴ **a tool for private individuals to monitor controllers' compliance** with the general principles governing the

⁴ Also confirmed by the CJEU in *Rijkeboer* (n 4) [51]; *Nowak* (n 4) [57].

processing of personal data, notably Articles 5-6 of the GDPR (cf. recital 63 GDPR); **and a due process guarantee.**⁵

- (4) Empirical research and many accounts by experts in the field have repeatedly demonstrated online platforms, and **social media operators in particular, not to fully respect the right of access.**⁶ Twitter, for instance denies giving access to t.com data, i.e. the logs of all hyperlinks users click when using the Twitter service, because it would allegedly require a disproportionate effort.⁷ Similar issues exist with regard to Facebook and Apple.⁸ Even more, and easily verifiable by simply filing an access request right now, **most responses to such requests filed with large social media operators, do not include (all) inferred and derived data about the data subject.** The ‘disproportionate effort’ defence is absurd in light of the very business model underlying these operators, the scale at which they operate and their available resources. As written before,

‘An argument that a ‘manifestly unfounded or excessive’ request might be construed as one which relates to any sufficiently large or complex processing operation sets a dangerous precedent that some data processing activities are ‘too big to regulate’. This logic would mean to say that some processing activities are at such a global scale, and so complex, and producing and capturing so much data about individuals, that they escape the reach of fundamental rights such as the right to access. This seems perverse: **the more impactful and the more sizeable the activity, surely the higher the acceptable cost of compliance on the data controller, and the more urgent and pressing the need to provide data subjects with oversight and control rights.**’⁹

- (5) This is very problematic in light of the vital role the right of access has (cf. above), particularly in the ubiquitous and high-impact sector of social media. It is therefore **important that the EDPB emphasises in its Guidelines, the need for social media operators to provide any and all personal data (including inferred and derived personal data) to data subjects upon request.** It should be made clear that social media operators can in principle not refuse to provide access to individual access requests because they would be *manifestly unfounded or excessive*.

- (6) When it comes to the additional information that needs to be provided in responses to an access request (Art.15(1) GDPR), the vast majority of controllers – and social media operators in particular – will simply provide data subjects with a copy of relevant sections from the privacy/data policy. Again, this is easily verifiable by submitting an access request with any social media operator. In still on-going empirical research I am currently conducting (to be published next year), **the overwhelming majority of controllers only refers or copy pastes (parts of) their privacy/data policy when asked for information under Art.15(1)**. This is problematic because controllers seem to systematically confuse their obligations under Artt.13-14 with those in Article 15.
- (7) The transparency requirements in Artt.13-14 are *ex ante* transparency measures, requiring controllers to proactively inform data subjects about how their personal data will be processed. This is generally given shape through privacy/data policies that are aimed at *all* data subjects. As such, it will often only contain generic information, many different purposes and lawful grounds, vague retention periods, etc. While not wishing to go into the many things that are wrong with most social media operators' privacy policies, I do wish to call attention to their obligations under Article 15(1). Indeed, if the right of access under Art.15(1) is to have practical meaning whatsoever (and any added value complementing Artt.13-14), **the content of the response should be tailored to the data subject in particular**. 'The added value of Article 15 is that it provides the possibility for individual data subjects to learn more about their particular situation upon request. This also follows from the Court's case law in *Nowak*¹⁰ and *Rijkeboer*^{11, 12}. It is worth reiterating the following anecdote from an earlier submission to the EDPB:

The issue is illustrated by the way in which Facebook responds to access requests:

Even when specifically asked *not* to simply recite their privacy policy, Facebook still does. When explicitly requested to provide 'a complete and detailed overview of all the different ways personal data have been and will be processed (not your general privacy policy, but a list of which of my data were used for which concrete purpose) as well as the exact lawful ground (art.6 (1) GDPR) for each processing purpose', Facebook responds:

We understand that Mr XYZ would like a complete and detailed overview of all the different ways in which his personal data have been processed and will be processed, including the legal basis relied on by Facebook. Whilst Mr XYZ indicates he does not seek our "general privacy policy", we'd like to clarify that the information requested by him is detailed in this document and our legal bases fly out.

Facebook's response is problematic because:

¹⁰ *Nowak* (n 4) [56].

¹¹ *Rijkeboer* (n 4) [69].

¹² Jef Ausloos, René Mahieu and Michael Veale, 'Getting Data Subject Rights Right A Submission to the European Data Protection Board from International Data Rights Academics, to Inform Regulatory Guidance' (2020) 10 JIPITEC <<http://www.jipitec.eu/issues/jipitec-10-3-2019/5031>>.

(a) it refers to its privacy policy, which manifestly does *not* link exactly what personal data is used for exactly what purpose and under what lawful ground each individual purpose falls.

(b) it fails to provide a tailored answer to the data subject in particular, who wishes to know what exact information was collected for what purposes and under what lawful ground, for his particular situation.¹³

- (8) With this in mind, the present Guidelines offer a great opportunity to emphasise how **the right of access in Article 15 requires controllers to tailor the information to the specific situation of the data subject making the request**, meaning that each data subject can ask, for example: (a) what exact purposes their specific personal data has been processed for; (c) the exact (categories of) recipients their personal data has been disclosed to; and (g) what source their specific personal data were obtained from.¹⁴
- (9) Specifically, the EDPB can do this in paragraph 93 of the draft Guidelines, which currently reads that *‘In general, to fulfill the requirements of Article 15 (1) GDPR and to ensure full transparency, controllers may want to consider implementing a mechanism for data subjects to check their profile, including details of the information and sources used to develop it. The data subject is entitled to learn of the identity of the targeter, and controllers must facilitate access to information regarding the targeting, including the targeting criteria that were used, as well as the other information required by Article 15 GDPR.’*
- (10) The final version of this paragraph can be edited into (additions in bold): ‘In general, to fulfill the requirements of Article 15 (1) GDPR and to ensure full transparency, controllers may want to consider implementing a mechanism for data subjects to check their profile, including details of the information and sources used to develop it, **the specific lawful ground relied upon for each processing purpose, as well as the (categories of) recipients, retention periods (or criteria) of all their personal data in granular fashion.** The data subject is entitled to learn of the identity of the targeter, and controllers must facilitate access to information regarding the targeting, including the targeting criteria that were used, as well as the other information required by Article 15 GDPR. **It is important that such information should be tailored to the particular situation of the data subject, complementing any information already given under Articles 13-14.’**
