

Roma 26 November 2020

Dear All,

trying to force the data transfer to USA or any other country which DO NOT guarantee the same rights listed in GDPR, it's an attempt to change Over The Top companies ' business models....which is simply NOT possible.

We MUST be aware that the real threat it's not an Intelligence agency which is just doing what it's called to do.....

The real threat it's that an Intelligence agency to reach the goal, needs to access to someone PRIVATE server of companies which are spying all and everything.

What is the meaning to allow DATA “exporters” and “importers” to keep on doing their job when data are abused just like in all the SCANDALS known in the last 15 years (just to cite Cambridge Analytica !)

Digital twins (of machines, companies, institutions and PERSONS) are fed with data....allowing this, means to destroy our democracies, companies, freedoms and capability to compete in the global market!

DO NOT allow any interpretation and “escamotage” to by pass privacy protection.

Thanks for the attention

Best regards
Vasco Petrucci
